

Troubsko - this is place where I had my holiday internship from "Erasmus +" program. I spent 2 months working at Research Institution. My supervisor Oldřich helped me develop my knowledge and ability in genetic and microbiology area. My tasks include for example: DNA research of bumblebees for the presence of parasites in their digestive tract and atmospheric nitrogen typing by Rhizobium in a plant. All workmates were friendly and helpful for me. I am very grateful for possibility using laboratory, canteen and company flat. During my stay I learned Czech language a little and I visit wonderful Moravian Karst. In addition I took part in "hody" so I knew folk tradition. It was amazing time which I will remember for a long time.

Děkuji Vám Moc! :)
